

**Rockgut pale
skin areas
Step-by-step**

Paints required:

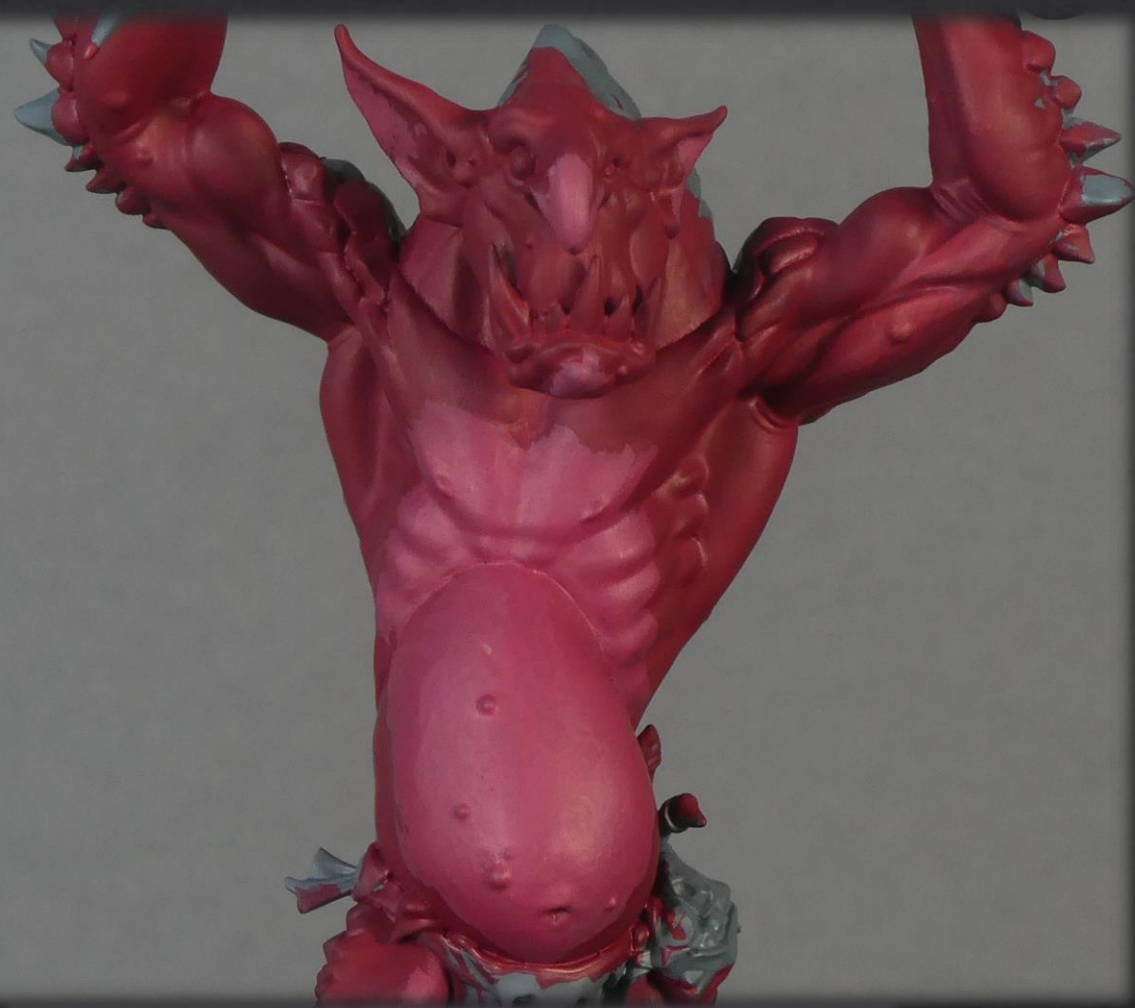

Pale areas

- Cadian fleshtone
- Khorne red
- Kislev flesh
- Ivory (Vallejo mc)

**Basecoat the skin
with khorne red**

**Now layer the areas you
want to be pale on the skin
with a 1:1 mix of khorne red
& cadion fleshtone – like the
belly, nose & ears.**

We now glaze or wet blend the areas where the previous layer meets the khorne red basecoat, with a 3:1 mix of khorne red & cadian fleshtone, until we have a smooth transition. Add 3-4 parts of water. I have added a video reference for how i glaze & wet blend in the post description.

We now start glazing the raised areas on the areas we want to look pale, with a 2:1 mix of cadian fleshtone & khorne red.

We now glaze the most raised areas with pure cadian fleshtone.

We now highlight the raised areas with kisleve flesh.

We once again glaze the most raised areas with a 2:1 mix of kislev flesh & ivory. Done!
