Plasma gun
Step-by-step

Paints required:

Plasma gun
- **Corvus black**
- **Abaddon black**
- **White**
- **Ahriman blue**
- **Ulthian grey**
- **Mechanicus std grey**

We start by basecoating the gun with corvus black & the plasma areas with pure white.

We no glaze these areas with Ahriman blue – add 2-3 parts of water. We furthermore glaze the area covered in Corvus black, just around the plasma area with the same mix.

We now glaze in the lower area of the plasma coil with white – add 2 parts of water. We then glaze this area again with ahriman blue – this time add 4 parts of water.

We now shade the upper flat area of the plasma coil, with a 1:1 mix of ahriman blue & abaddon black – add 3-4 parts of water. We furthermore highlight around the edges with a 2:1 mix of ahriman blue & white. Add 1-2 parts of water.

We now work on the gun.
Edge highlight the remaing
the edges on the gun with
mechanicus std grey.

We now highlight all the sharpest edges
on the gun with ulthian grey. Done! ☺
