

**Fun Facts**

There is a beautiful world out there waiting for us. And we have the facts to prove it.

**Color and Draw**

Stay creative at home with our coloring and drawing templates.

**Cut-Outs**

Print them, cut them out and decorate your fridge, laptop or your kid's room.

**Concentration Game**

Try to find the matching drawings from the kurzgesagt universe.

## Take a Deep Breath

Life is Beautiful – Even if You're Stuck Inside

# Fun Facts about the World

Even though we're stuck inside we still appreciate this beautiful world we live in!

01

## The Ocean is Deeper Than Mount Everest

The distance from the ocean's surface to the maximum known depth, the Challenger Deep, is almost 11 kilometers. The Mount Everest is only 8.8 kilometers high. So if you were to put Mount Everest into the Challenger Deep it would still be more than 2 kilometers away from the ocean's surface.

02

### Salty Oceans

The salt in the oceans is "dissolved" rock from land, which is washed into the seas by rain. The concentration of salt in seawater (salinity) is about 35 parts per thousand, on average.

This is quite a lot! If the salt in the ocean could be removed and spread evenly over the Earth's land surface it would form a layer more than 500 feet thick, about the height of a 40-story office building.

03

### Heavy on the Stomach

The sloth is widely known for its slowness and inactivity. If you think the way they move is slow, wait until you hear about their digestion! Sloths are arboreal which means that they mainly live on trees.

So they mostly eat leaves which are pretty hard to digest. Also sloths need to digest them very thoroughly in their large stomachs to get all get enough nutrients. And they take their time: a single leaf can take up to a month or more to be fully digested!

04

### The Longest Day

Venus is the hottest planet in our solar system and incidentally also has a very slow axis rotation. This means that to complete one full rotation Venus needs about 243 Earth days. While orbiting around the sun only takes Venus 224 Earth days. This means a single day on Venus is longer than a Venus year!

05

### The Nutty Gardener

Did you know that tree squirrels are quite the prolific gardeners? During the autumn and winter months their main diet consists of nuts and seeds. Active throughout the year, the squirrels store large quantities of seeds and nuts in the ground – usually acorns – to see them through the winter. But squirrels don't recover all their hidden treasure. These forgotten acorns are now free to sprout and grow into beautiful oak trees. Because of this tree squirrels are one of the most important animals for helping oaks to spread around the world.

06

### Part of the Earth

Did you know that the Moon was once part of Earth? The theory is that when Earth was a relatively young planet, it was struck by a giant object and this collision broke a piece of the Earth away to create the Moon. This piece then began to orbit the Earth as a result of its gravitational pull.

07

### Bacteria Everywhere!

Every one of us is teeming with bacteria all the time! In fact there are 10 times more bacterial cells in your body than human cells. Don't worry, though: most of these bacteria are helpful. In fact, we couldn't survive without them. Some help us digest our food and others help strengthen our immune system. Thank you, bacteria!

# Coloring Corner

Take some time out of your day to focus on the simple task of coloring. Just print these pages at home and color with whatever you have at hand. Whether you're sitting down

with your kids or coloring these pages alone, we recommend preparing a fresh pot of tea to get the full calming effect.

# Get Creative!

It can be hard to stay creative while you're stuck at home. But it can help to keep your brain active. Simply print this page and take this chance to challenge yourself.

Try to come up with as many different sea creatures as you can. They don't have to be pretty or make a whole lot of sense. Just have fun with it!

# Get Creative!

Now how about space creatures? Can you try to imagine what aliens might look like? How many can you come up with?

# Paper Zoo

Bring these creatures into your home. Print them, cut them out and set them free in your apartment. Put them on your fridge, use them to decorate your laptop or glue them

to a couple of pencils to play with them. It's your choice!

## Sea Creatures

## Insects

Birds

# Build an Octopus

What's better than being stuck at home? Being stuck at home with a cute octopus! Print this cute creature, glue front and back together on a piece of cardboard and put

the parts together – voilà – Octopus companion for the quarantine (and for life).

# Message in a Bottle

Since you might not be able to visit your friends and family right now maybe you would like to let them know you're thinking about them. Print this postcard, write something nice or draw a duck and bring a smile to their faces.

Send it to someone you miss!
